

As different services are needed in different IT security stages, we formulated our services into 4 interrelated stages – **Plan, Review, Implement** and **Monitor**. All stages are equally important to the security systems which are worth tackling one by one.

IT Security Consultancy Service is under the category of **Planning Service**. IT Security trend is ever-changing. Prior planning is crucial for every organization. Planning service is more than just the acquisition of advance technology solution, other elements such as business requirement definition, infrastructure design, network design, design of appropriate policies & procedures are also very important. Other elements such as periodic training would also facilitate your staff to understand the requirement. Our consultants have over 30,000 hours of IT Security consulting, implementation and audit experience. Our consultants would be able to provide professional advices on overall IT security system planning and assist you to develop a secured IT system in a both cost and control effective way. This could help you to excel within your business environment.

Aims and Objectives

It may be a challenging question to CIO or CTO to implement a solution in your infrastructure, as the IT security trend is ever-changing. eWalker consultants' security domain knowledge lie on wide spectrum, from banking & financial services to everyday life industries such as manufacturing, education, healthcare and government sectors.
