

IT Policy & Procedures Development

eWalker Consulting Ltd.

As different services are needed in different IT security stages, we formulated our services into 4 interrelated stages – **Plan, Review, Implement** and **Monitor**. All stages are equally important to the security systems which are worth tackling one by one.

IT Policy & Procedures Development Service is under the category of **Planning Service**. IT Security trend is ever-changing. Prior planning is crucial for every organization. Planning service is more than just the acquisition of advance technology solution, other elements such as business requirement definition, infrastructure design, network design, design of appropriate policies & procedures are also very important. Other elements such as periodic training would also facilitate your staff to understand the requirement. Our consultants have over 30,000 hours of IT Security consulting, implementation and audit experience. Our consultants would be able to provide professional advices on overall IT security system planning and assist you to develop a secured IT system in a both cost and control effective way. This could help you to excel within your business environment.

Aims and Objectives

IT Policies and procedures are not static documents. They are lively and dynamic documents which would need to update according to business needs, technology trend and company culture. Policy and procedures are guidelines that should be aligned with business operations and resolved the identified security issues. eWalker consultants would assist clients in developing and documenting series of usable, applicable and auditable IT security documentations.

Benefits

- IT Security Policies and procedures are the baselines of security protections. Through the security policies and procedures, controls that support the corporate business requirements could be outlined
- eWalker consultants would extract the business requirements and derive the suitable policies and procedures based on existing IT security frameworks and domain specific security requirements, such that they could fit well to your organization.

Features

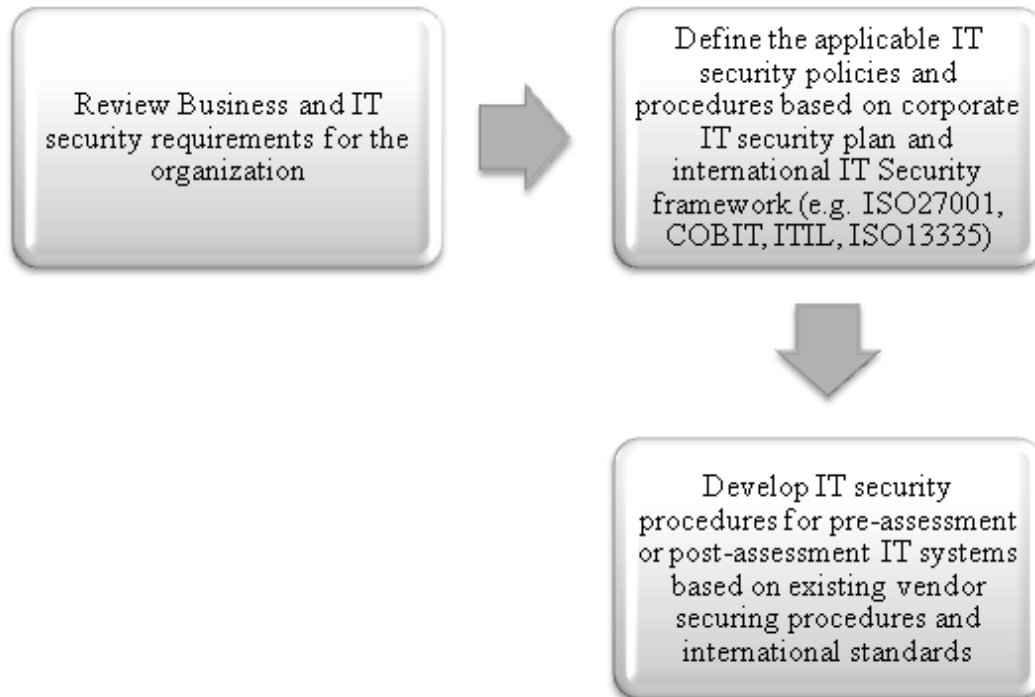

- Using a structural IT Security approach (SABSA), eWalker Consultants would examine the system in different dimensions, such as business, operations and users' views.
- Policy & procedures development service is considered to be part of the IT Security Consultancy services
- By understanding the culture in the organization, eWalker consultants would derive implementable, measurable and auditable policies and procedures.

Deliverables

As part of the consultation service eWalker's security consultants will deliver:

- Corporate IT Security Policy
- IT Security Operational Procedures

Methodology

Limitation

- IT Security and business requirements have been outlined in the organization
